OH SHIT I Think this is for it to work on crappy stereos that just play MP3 from a flash drive!!!

To adapt them to work with bluetooth

hm I don't hear anything and the mp3 file exits though

so I guess you need a dumber player that doesn't try to seek in a file

WAIT I THINK I KNOW WHAT THE OTHER FILES ARE

YOU CAN'T PLAY THEM, BUT IF YOU OPEN IT, IT TELLS THE PHONE TO GO TO THE NEXT SONG

so it's used to detect when you pressed previous/next!!! and from that, it signals to the bluetooth device

to go back/forward

who the f*** makes this ASIC?!? There's no way this thing is economies of scale
