Grep through PDF files 2

Grep through PDF files

While the normal `grep` utility is great to search text files, it does not work with PDF files.

This is solved by using the `pdfgrep` utility instead.

For example, to search for a word in a directory of PDF files:

```
pdfgrep -i -R -P -nn "word"
```

Where -i will ignore the case, -R will search recursively and -P will use regex mode and -n will print the page number.

Note that searching words will typically yield better results as sentences split into multiple lines don't parse well on many documents.
