Convert still image to a video 2

Convert still image to a video

You can convert a still picture into a video of your specified length. You just need to loop the input, and provide `-t` to set the time.

In the below, change the `-t` for how long the resulting video should be and mark `-loop 1` for the input. All other parameters are placeholders and don't really matter.

I found it helpful to specify `pix_fmt` since otherwise it tends to use `yuv444p` (which is good for better colours) but fails with some codecs that don't support it.

```
ffmpeg -loop 1 -i input.png -c:v libx264 -crf 18 -r 30 -t 10 -pix_fmt yuv420p output.mkv
```
