Cannot unmount USB drive 2

Cannot unmount USB drive

If you try unmounting a disk as follows (wherever you mounted it)

```
sudo umount /run/media/username/FlashDrive
```

and you get an error *umount: target is busy*, it can be very annoying to find the process that is using something from the drive.

You can use `lsof` to check which processes are accessing the files.

```
lsof | grep '/run/media/username/FlashDrive'
```

This will show you which process is using which file, which can be useful.
